

How To Enjoy The Pan-Galactic Freedom

This cutting edge technology will give you new levels of comfort when travelling the tables of time. Would you like to know how it works? If so then read on.

First, the user types in their time & place of destination using the multi-linguistic keyboard, with an ocean design and over four hundred languages. This causes a tele-tynomik beam (information ray) to generate a constant beam of information to both the portal projector and the viewing device. Next, use the radio-telescopic viewing device to see your destination. To change your destination, plug it back in and restart. Subsequently, the user flicks the trigger switch, which is black with a red square in the middle. Consequently, as long as the switch is closed, the portal shall stay open. Step through your personalised portal and enjoy the colourful journey through the wormhole to your destination.

Please note: do not close the portal while in the worm hole. To go home, put in the destination and repeat the original process.
